PROJECT DESCRIPTION:

We aim to construct a compiler for a subset of a programming language Mini C in 3 phases. [Code Optimization](#) and [Machine Code](#) generation is not the scope of the project. These phases include:

Phase I: Lexical Analyser (Laxer)

Phase II: Syntax Analyser (Parser)

Phase III: Semantic Analyser

SAMPLE LANGUAGE:

MINI C:

Mini C is a simple subset of the standard C language. It does not include arrays, structs, unions, files, sets, switch statements, do statements, or many of the low level operators. The only data types permitted are int and float.

SAMPLE CODE:

```
ADDRESS searchIdent(void)
/* search the hash table for the identifier in yytext.
insert if
necessary */
{ struct Ident * ptr;
  int h;
  h = hash(yytext);
  ptr = HashTable[h];
  while ((ptr!=NULL) && (strcmp(ptr->name,yytext)!=0))
    ptr = ptr->link;
  if (ptr==NULL)
    if (dcl)
    { ptr = malloc (sizeof (struct Ident));
      ptr->link = HashTable[h];
      strcpy (ptr->name = malloc (yytext+1), yytext);
      HashTable[h] = ptr;
      ptr->memloc = alloc(1);
      ptr->type = identType;
    }
  else { printf ("%s \n", yytext);
        yyerror ("undeclared identifier");
        return 0;
      }
}
```

LEXICAL SPECIFICATION:

```
INT    [0-9]+
EXP    ([eE][+-]?{INT})
NUM    ({INT}\.?(INT)?|\.{INT}){EXP}?
%{
#include <stdlib.h>
ADDRESS searchIdent(void);
ADDRESS searchNums(void);
ADDRESS alloc(int size);
}%
%start COMMENT1 COMMENT2
%%
<COMMENT1>.+      ;
<COMMENT1>\n      BEGIN 0;          /* end comment */
<COMMENT2>[^\n]+  ;
<COMMENT2>\n      ;
<COMMENT2>\n      BEGIN 0;          /* end comment */
"//"              BEGIN COMMENT1;
"/*"              BEGIN COMMENT2;
int               {yylval.code = 2; return INT;}
float             {yylval.code = 3; return FLOAT;}
for               return FOR;
while             return WHILE;
if               return IF;
else             return ELSE;
"=="             {yylval.code = 1; return COMPARISON;}
\<               {yylval.code = 2; return COMPARISON;}
>               {yylval.code = 3; return COMPARISON;}
"<="            {yylval.code = 4; return COMPARISON;}

"(">="          {yylval.code = 5; return COMPARISON;}
"!="            {yylval.code = 6; return COMPARISON;}
[a-zA-Z][a-zA-Z0-9_]* {yylval.address = searchIdent();
                      return IDENTIFIER;}
{NUM}           {yylval.address = searchNums(); return NUM;}
[ \t]           ; /* white space */
\n              lineno++;          /* free format */
.               return yytext[0]; /* any other char */
%%
yywrap ()
{return 1; /* terminate when reaching end of stdin */}
```

GRAMMER:

Function	→	Type identifier (ArgList) CompoundStmt
ArgList	→	Arg ArgList , Arg
Arg	→	Type identifier
Declaration	→	Type IdentList ;
Type	→	int float
IdentList	→	identifier , IdentList identifier
Stmt	→	ForStmt WhileStmt Expr ; IfStmt CompoundStmt Declaration ;
ForStmt	→	for (Expr ; OptExpr ; OptExpr) Stmt

OptExpr	→	Expr ε
WhileStmt	→	while (Expr) Stmt
IfStmt	→	if (Expr) Stmt ElsePart
ElsePart	→	else Stmt ε
CompoundStmt	→	{ StmtList }
StmtList	→	StmtList Stmt ε
Expr	→	identifier = Expr Rvalue
Rvalue	→	Rvalue Compare Mag Mag
Compare	→	== < > <= >= !=
Mag	→	Mag + Term Mag - Term Term
Term	→	Term * Factor Term / Factor Factor
Factor	→	(Expr) - Factor + Factor identifier number

PROBLEMS FACED IN PROJECT:

PROBLEM 1: NEW TO THE LANGUAGE

The language was new for all of us. It takes too much time to understand but we did our best to learn it and implement it.

PROBLEM 2: WINDOW CORRUPTED

When I installed virtual machine on my PC, windows got corrupted.

PROBLEM 3: PROJECT LOAD & LOCKDOWN

We all have project load on ourselves as well as FYP is also going on.
